Application for the position of Analytics Engineer (m/f/d) – Reference AE-2026-14

Dear Ms Example,

I am applying for the Analytics Engineer (m/f/d) position at Example Mobility GmbH. Your posting describes moving the remaining legacy reports from scheduled SQL scripts to dbt and Power BI, and that is close to the migration work I have done at a parcel delivery company in Rotterdam.

At Northwind Logistics I moved 30 reporting queries from a legacy SQL Server to Snowflake with dbt models and tests. I also contributed to the design of the new data warehouse together with two data engineers. I use SQL every day, I work with star schemas and slowly changing dimensions, and I hold the dbt Analytics Engineering Certification from 2024.

Turning the questions of city operations managers into reliable data models depends on understanding what they actually need. At Northwind I own the weekly delivery-performance dashboard used by 12 depot managers, and I have gathered reporting requirements from operations managers and trained non-technical users. I build in Python as well: the depot staffing model that the planning team uses each week is written in it.

I can start on 20 November 2026. I am open to relocating within the EU, so the relocation support you mention for Berlin is relevant to me. I would be glad to talk through the role and my work in an interview.

Kind regards,

Alex Morgan
